PROFESSIONAL SUMMARY

Cloud and DevOps Engineer with hands-on internship experience and a growing independent project portfolio spanning AWS infrastructure, Infrastructure as Code, containerization, and CI/CD pipeline design including regulated, compliance-driven environments. Comfortable across the full delivery lifecycle: provisioning infrastructure with Terraform, containerizing applications with Docker and orchestrating with Kubernetes, building CI/CD pipelines with GitHub Actions and GitOps workflows via ArgoCD, and applying least-privilege security and secrets management practices. Physics graduate with strong analytical, quantitative, and troubleshooting foundations. Works well independently, documents decisions clearly, and collaborates effectively with engineering and technical teams.

PROFESSIONAL EXPERIENCE

AWS Cloud Engineer — Zetheta Algorithms Private Limited

Remote · 3-Month Internship · 2026

- Designed and built a zero-downtime CI/CD pipeline for a regulated digital banking environment, integrating automated security, testing, and compliance checks across the full deployment lifecycle
- Implemented blue-green and canary deployment strategies with automated, metrics-driven rollback to minimize production risk
- Provisioned cloud infrastructure on Kubernetes (EKS) using Terraform, with GitOps-based deployments managed through ArgoCD and GitHub Actions
- Automated regulatory compliance validation (RBI, PCI-DSS) using policy-as-code with OPA/Rego, reducing manual audit overhead
- Designed a zero-downtime database migration strategy for high-volume financial data using the expand-contract pattern
- Authored deployment runbooks and incident response documentation to support operational reliability

Cloud/DevOps Engineer — Springer Capital

Remote · 3-Month Internship · 2026

- Supported DevOps activities across Linux server environments, performing Bash scripting and automation tasks for routine infrastructure operations
- Assisted with Infrastructure as Code implementation using Terraform to provision and manage cloud infrastructure
- Contributed to CI/CD pipeline maintenance, deployment automation, and infrastructure reliability initiatives within a fast-paced financial technology environment
- Collaborated with development, infrastructure, and technical teams to support reliable, repeatable software delivery

TECHNICAL SKILLS

- Cloud Platforms: AWS (EC2, VPC, Lambda, API Gateway, DynamoDB, RDS, S3, CloudFront, ECR, IAM, STS, Secrets Manager, SQS, SNS, ElastiCache, Auto Scaling, ALB/NLB, CloudWatch, EKS); Microsoft Azure
- Infrastructure as Code: Terraform (modules, variables, data sources, outputs, remote state)
- Containers & Orchestration: Docker, Kubernetes, Helm, ArgoCD, Amazon ECS
- CI/CD & Automation: GitHub Actions, GitOps, OIDC-based short-lived credentials, GitLab CI, scripted validation with Bash and Python
- Operating Systems: Linux administration (physical & virtualized environments), Bash scripting and automation
- Monitoring & Observability: Amazon CloudWatch (metrics, alarms, dashboards); Prometheus & Grafana
- Security & Compliance: Least-privilege IAM, AWS Secrets Manager, GitHub OIDC/STS federation, OPA/Rego policy-as-code, SAST/DAST, PCI-DSS-aligned controls
- Software Delivery Practices: Agile Software Development, GitOps, Twelve-Factor App methodology, environment-based configuration and promotion

- Languages & Scripting: Python, Bash, SQL
- Networking: VPC design, subnetting, load balancing, high availability architecture

EDUCATION

Bachelor's Degree, Physics 2025

Strong foundation in analytical problem-solving, quantitative reasoning, and systems thinking directly applicable to infrastructure design and troubleshooting.
