

SIMEON SIAKA

CLOUD INFRASTRUCTURE & DEVOPS ENGINEER

Lagos, Nigeria | [+234 806 782 7549](tel:+2348067827549) | simeonvault@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL PROFILE

Cloud infrastructure engineer with hands-on experience building AWS cloud and DevOps projects. Curious, driven, and eager to grow in a fast-paced African startup. Demonstrated ownership through independently planning, deploying, troubleshooting, and documenting technical solutions using AWS, Terraform, Docker, GitHub Actions, Linux, Bash, and Python. Communicates clearly, learns quickly, and is motivated by solving practical problems that improve people's everyday lives. Based in Lagos and available for hybrid work in Ikeja.

CORE SKILLS

Cloud & Engineering: Amazon Web Services (AWS), Terraform, AWS SAM/CloudFormation, Docker, GitHub Actions, Git/GitHub, Linux, Bash, Python

Technical Foundations: Cloud networking, Infrastructure as Code (IaC), CI/CD, APIs, databases, monitoring, security groups, Identity and Access Management (IAM), troubleshooting

Professional Strengths: Curiosity, ownership, fast learning, analytical thinking, clear communication, collaboration, empathy, proactive problem solving

SELECTED PROJECTS

FinTrust Customer Portal | Terraform, Docker, AWS

- Provisioned a repeatable three-tier AWS environment with an Application Load Balancer, Auto Scaling, EC2, RDS MySQL Multi-AZ, and least-privilege security controls.
- Containerized a Flask application and resolved database connectivity, health-check, container-port, environment-variable, and deployment issues.

NovaTech Serverless Website | GitHub Actions, OIDC, S3, CloudFront

- Built an automated deployment workflow that validates releases, synchronizes files to a private S3 origin, and creates CloudFront cache invalidations.
- Replaced long-lived AWS keys with OpenID Connect (OIDC) temporary credentials, demonstrating ownership, speed, and secure engineering practice.

LogiHaul Scalable Cloud Architecture | AWS, Reliability, Observability

- Designed a six-layer logistics architecture for a 50x traffic-spike scenario using Auto Scaling, DynamoDB capacity planning, asynchronous processing, and Lambda concurrency controls.
- Documented failure scenarios, security decisions, monitoring, disaster recovery, and operational best practices for a platform serving users across Nigeria.

EDUCATION & DEVELOPMENT

Bachelor of Science in Physics | Federal University Lokoja | 2025

- Built a quantitative foundation in analysis, structured reasoning, experimentation, and problem solving.

AWS Cloud Accelerator | BaseStack Academy | 2026

- Completed practical cloud labs and a business-focused architecture capstone covering compute, networking, storage, databases, serverless services, monitoring, security, and documentation.
