

SIMEON SIAKA

CLOUD INFRASTRUCTURE & DEVOPS ENGINEER

Lagos, Nigeria (Open to Remote / Hybrid) | +234 806 782 7549 | simeonvault@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL PROFILE

Cloud infrastructure and DevOps engineer building secure, reproducible AWS systems with Terraform, containers, and keyless CI/CD. Demonstrated ownership through independently planning, deploying, troubleshooting, and documenting technical solutions across three end-to-end projects, spanning three-tier architecture, serverless deployment automation, and scalable, observability-focused system design. Core stack: AWS, Terraform, Docker, GitHub Actions, Linux, Bash, and Python, with foundational Kubernetes knowledge. Communicates clearly, learns quickly, and is motivated by solving practical infrastructure problems with evidence-driven, well-documented engineering.

CORE SKILLS

Cloud Platforms: AWS (EC2, RDS, S3, CloudFront, Lambda, DynamoDB, IAM, VPC/Security Groups)

Infrastructure as Code & Automation: Terraform, AWS SAM/CloudFormation, GitHub Actions, OIDC-based keyless CI/CD pipelines

Containerization & Deployment: Docker, container orchestration fundamentals (Kubernetes), Auto Scaling, Application Load Balancer

Scripting & Systems: Python, Bash, Linux administration, Git/GitHub, networking fundamentals

Security & Reliability: IAM least-privilege design, security groups, disaster recovery planning, monitoring and observability, incident troubleshooting

Professional Strengths: Curiosity, ownership, fast learning, analytical thinking, clear communication, collaboration, proactive problem solving

SELECTED PROJECTS

FinTrust Customer Portal | *Terraform, Docker, AWS* | [View repo](#)

- Provisioned a repeatable three-tier AWS environment with an Application Load Balancer, Auto Scaling, EC2, RDS MySQL Multi-AZ, and least-privilege security controls.
- Containerized a Flask application and resolved database connectivity, health-check, container-port, environment-variable, and deployment issues.

NovaTech Serverless Website | *GitHub Actions, OIDC, S3, CloudFront* | [View repo](#)

- Built an automated deployment workflow that validates releases, synchronizes files to a private S3 origin, and creates CloudFront cache invalidations.
- Replaced long-lived AWS keys with OpenID Connect (OIDC) temporary credentials, demonstrating ownership, speed, and secure engineering practice.

LogiHaul Scalable Cloud Architecture | *AWS, Reliability, Observability* | [View repo](#)

- Designed a six-layer logistics architecture for a 50x traffic-spike scenario using Auto Scaling, DynamoDB capacity planning, asynchronous processing, and Lambda concurrency controls.
- Documented failure scenarios, security decisions, monitoring, disaster recovery, and operational best practices for a platform serving users across Nigeria.

EDUCATION & DEVELOPMENT

AWS Cloud Accelerator | *BaseStack Academy* | 2026

- Completed practical cloud labs and a business-focused architecture capstone covering compute, networking, storage, databases, serverless services, monitoring, security, and documentation.

Bachelor of Science in Physics | *Federal University Lokoja* | 2025

- Built a quantitative foundation in analysis, structured reasoning, experimentation, and problem solving.
